

Web API Installation Steps -

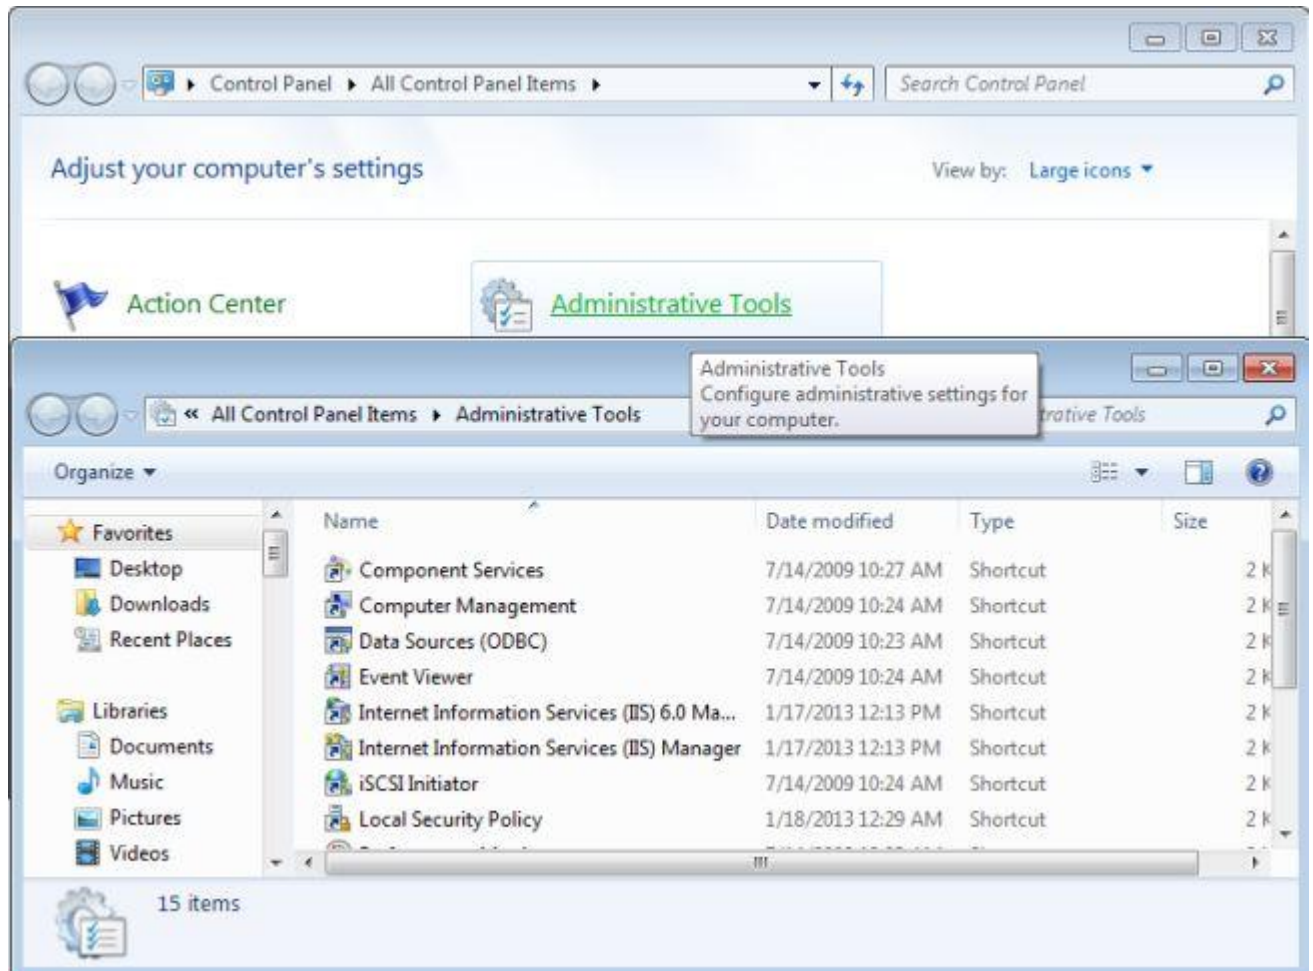

Step 1

First open IIS. We can start it from the Start menu; enter "inetmgr" into the search box. The image looks like this:

We can open it using the Control Panel.

- In the "Control Panel".
- Click on "Administrative Tools" -> "Internet Information Services (IIS) manager".
- The image is displayed in the following picture.

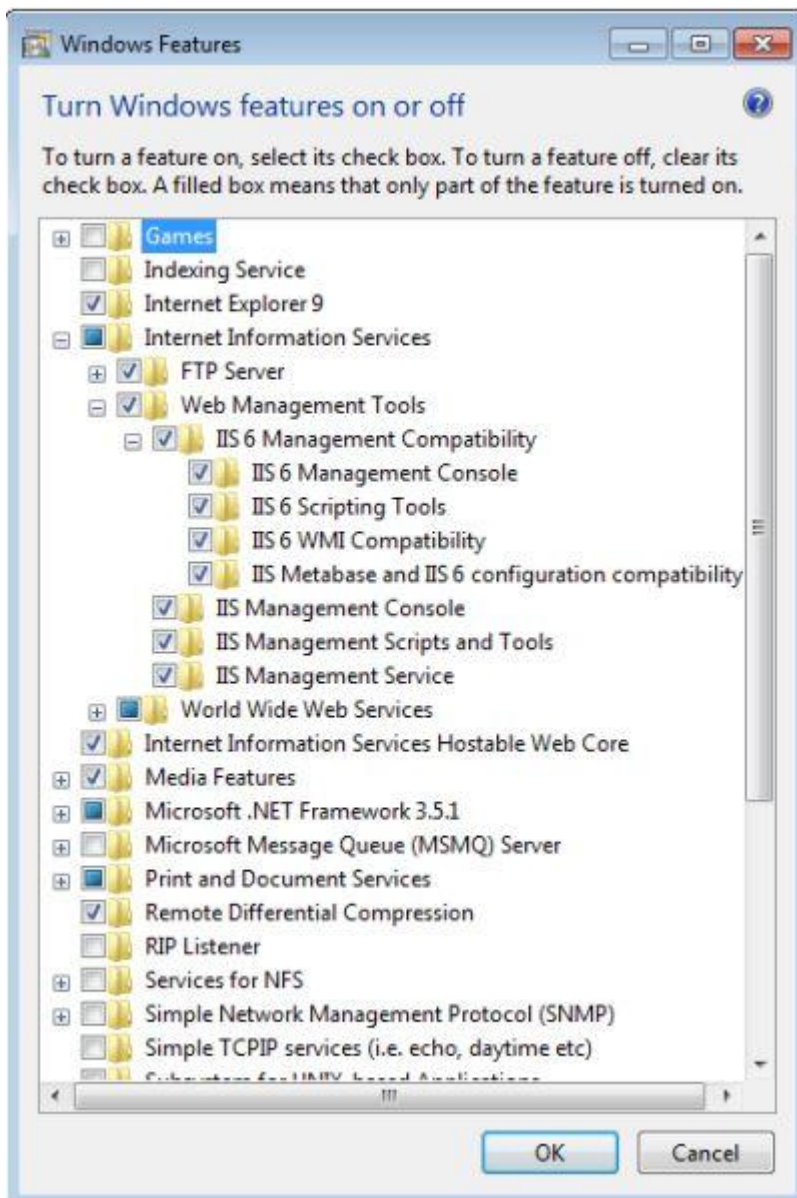

If you are not able to see the IIS manager then your system might not have IIS installed. For the installation follow this procedure:

- Open the "Control Panel".
- "Programs and Feature" -> "Turn Windows features on or off".

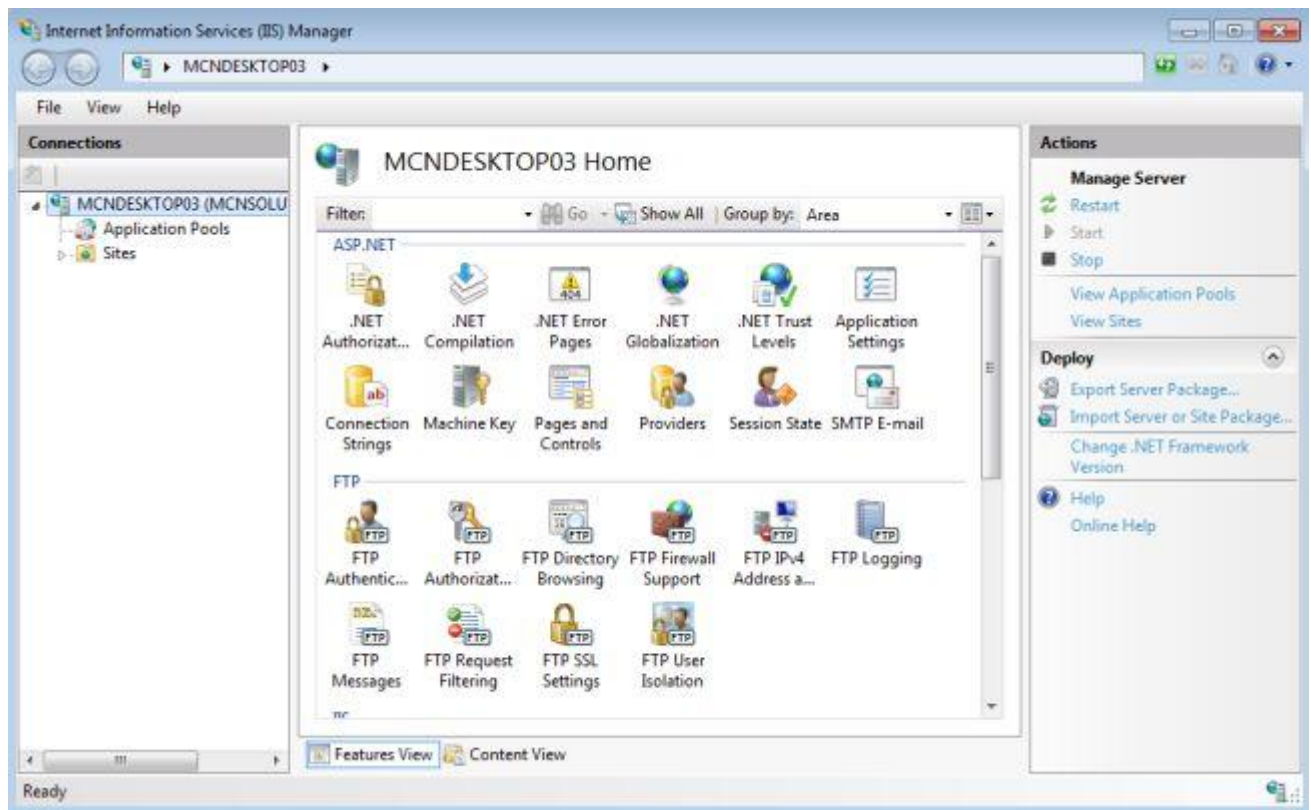

- There is open the "Windows Feature" window in "tree view".
- There are checkboxes for installation; select the checkboxes.

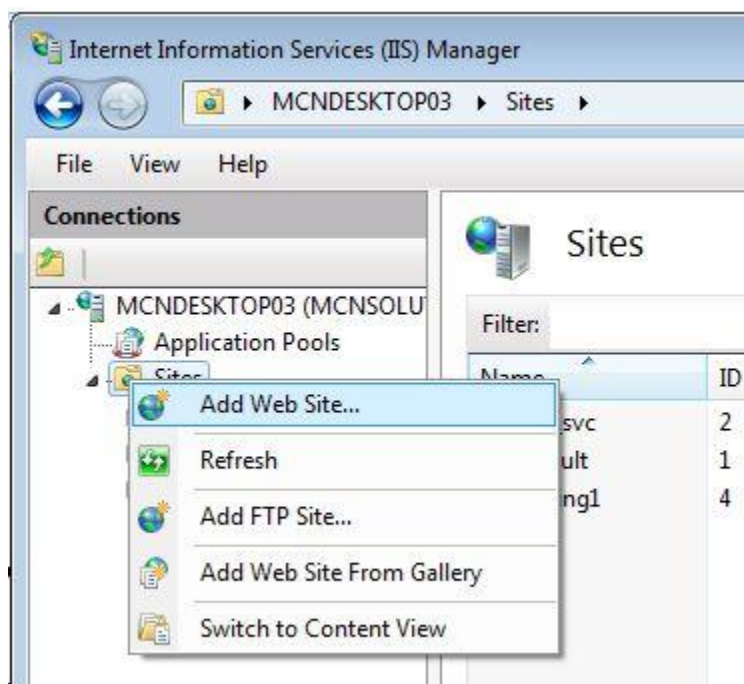

Step 2

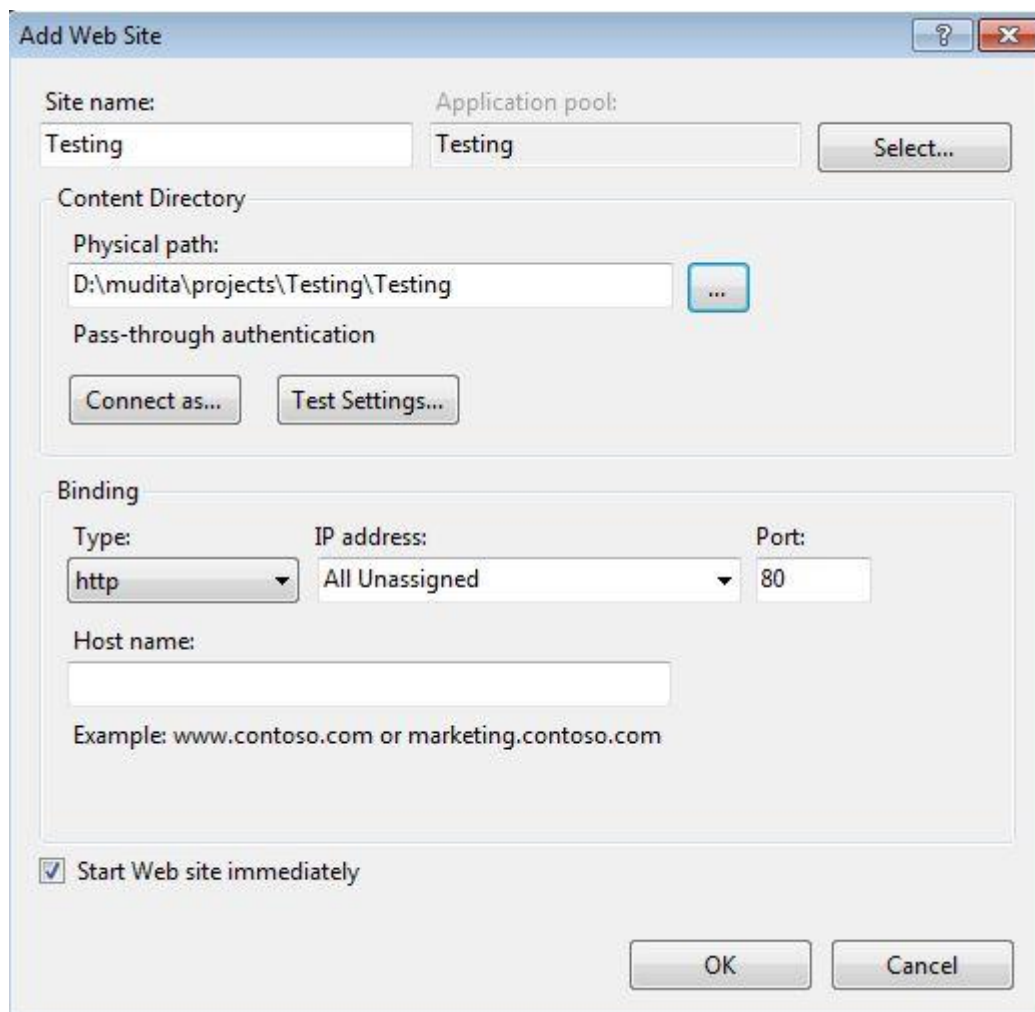

When you will open the Internet Information Services (IIS) manger, the window looks like this:

- Now, right-click on the sites.
- "Sites" -> "Add Web Site".

Open a window. It looks likes this:

The 'Add Web Site' dialog box is shown. It has a title bar with a question mark and a close button. The 'Site name' field contains 'Testing'. The 'Application pool' field also contains 'Testing', with a 'Select...' button to its right. Below these is the 'Content Directory' section, which includes a 'Physical path' field containing 'D:\mudita\projects\Testing\Testing' and a browse button ('...'). There are also 'Pass-through authentication' options with 'Connect as...' and 'Test Settings...' buttons. The 'Binding' section shows 'Type' set to 'http', 'IP address' set to 'All Unassigned', and 'Port' set to '80'. There is an empty 'Host name' field with an example: 'www.contoso.com or marketing.contoso.com'. At the bottom, the 'Start Web site immediately' checkbox is checked. 'OK' and 'Cancel' buttons are at the bottom right.

In this window write the "Site name" here the site name is "Testing" and provide the Physical path.

When we click on the "Ok" button, a alert box is opened. It display the information about the port; the default port is "80" for the IIS website and if you want to change it then click on the "NO" button.

An alert box titled 'Add Web Site' is displayed. It contains a question mark icon and the following text: 'The binding '*:80:' is assigned to another site. If you assign the same binding to this site, you will only be able to start one of the sites. Are you sure that you want to add this duplicate binding?'. At the bottom are 'Yes' and 'No' buttons.

And change the port. Here I will provide the port "8080". And now click on the "OK" button.

Binding

Type: http IP address: All Unassigned Port: 8080

Host name:

Example: www.contoso.com or marketing.contoso.com

☒ Start Web site immediately

OK Cancel

Now a window is opened that looks like this:

Internet Information Services (IIS) Manager

MCNDESKTOP03 > Sites

File View Help

Connections

- MCNDESKTOP03 (MCNSOLU)
 - Application Pools
 - Sites
 - app_svc
 - Default
 - Testing1
 - Testing

Sites

Filter: Go Show All

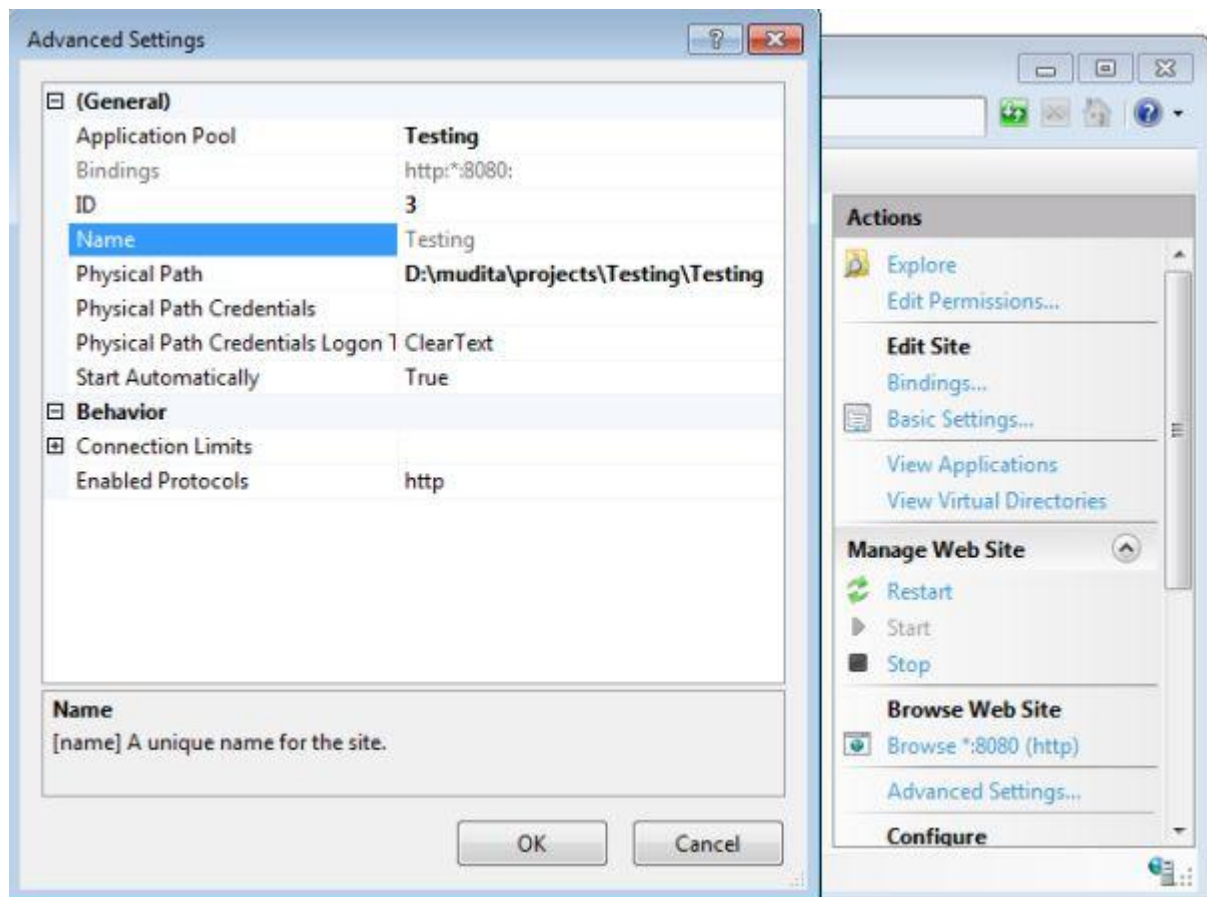

Name	ID	Status	Binding
app_svc	2	Stopped (...)	*:8081 (http)
Default	1	Started (ht...	*:80 (http)
Testing	3	Started (ht...	*:8080 (http)
Testing1	4	Stopped (...)	*:80 (http)

When we click on the Testing site from the Sites, then it opens as:

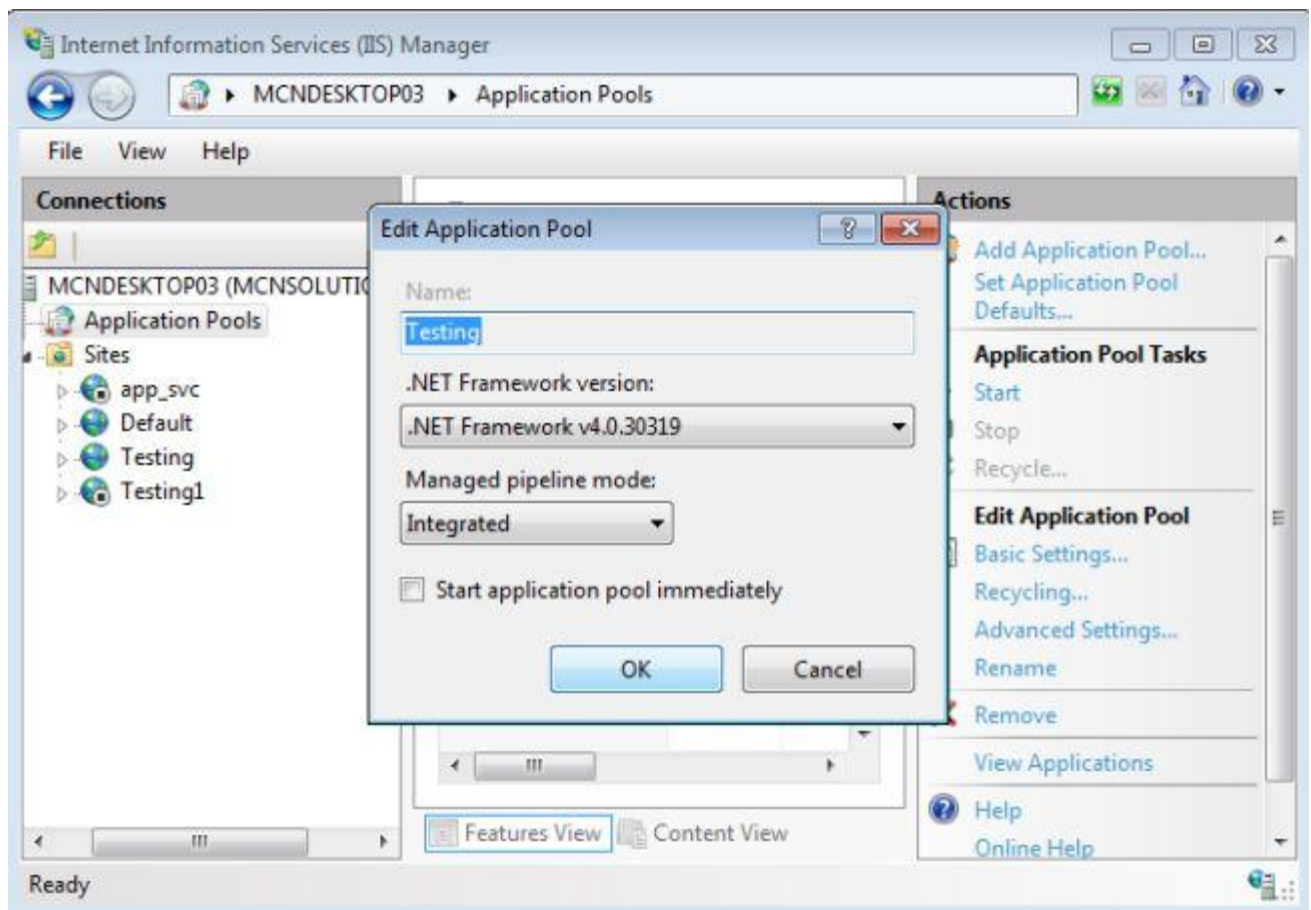

Step 3

Now we check the "Advanced setting" from the "right panel". And modify some settings.

Step 4

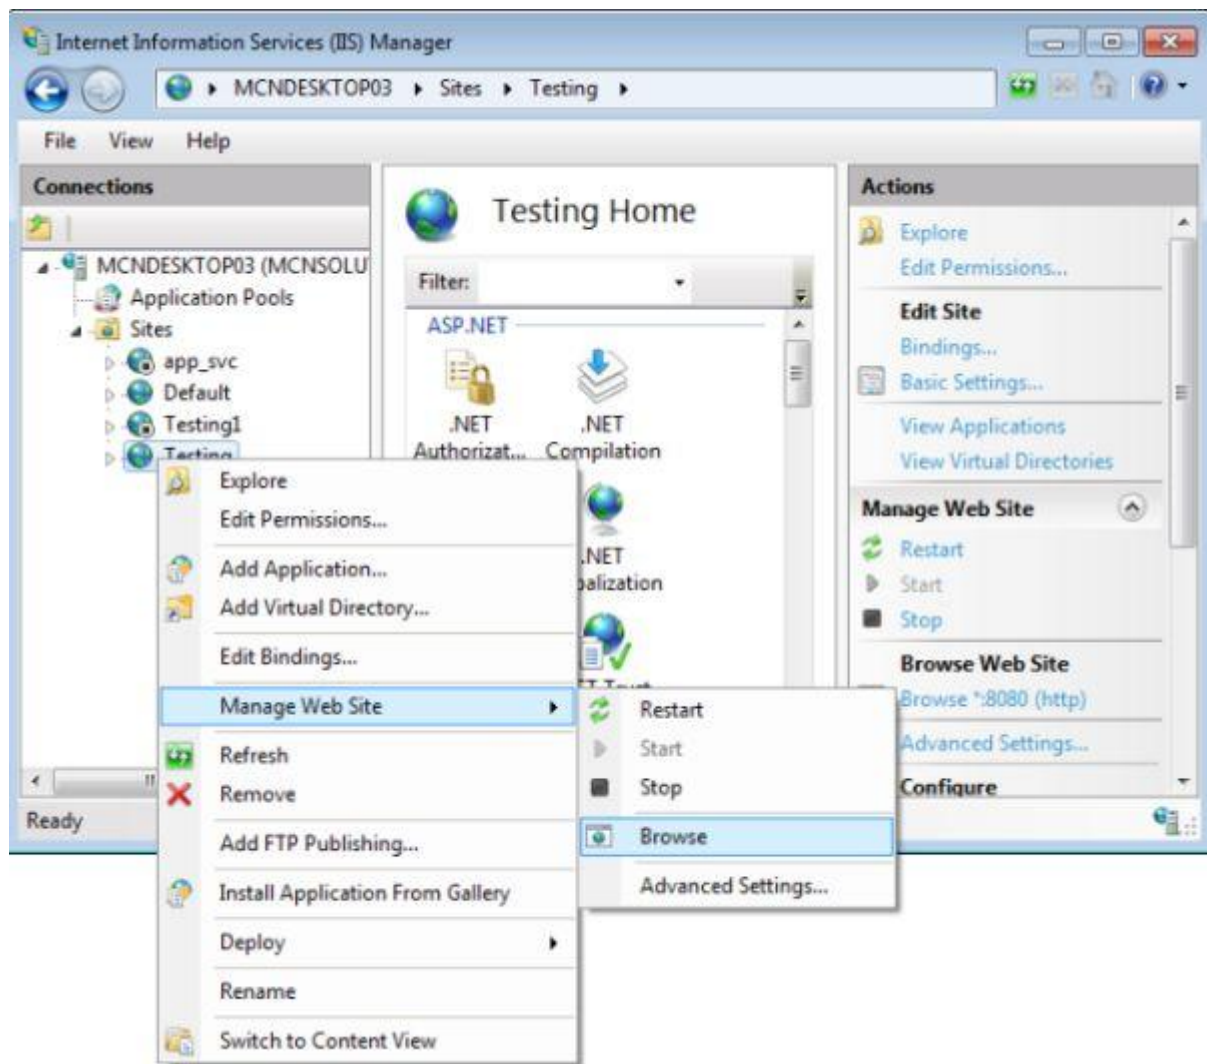

Now edit the "Basic settings" in the "Edit Application Pool" in the right panel. In it we select the ".NET Framework version" that is ".NET Framework v4.0.30319" and "Managed pipeline mode" as "Integrated".

Step 5

In this step we are ready to browse our application.

- Right-click on your website.
- Select "Manage Web Site" -> "Browse".

- The application is hosted. There is my application "Testing" Host at "8080" port that looks like this:
